

## Roller Shutter Touch-Up Paint

OZ Roll™ is proud to introduce our own range of quality touch up-paint to match all of our standard colours. This professional grade touch-up paint is made in Australia to specifically match the OZ Roll™ colour range.

As the coating techniques used on shutter products differ dramatically we have formulated two types of touch up paint. The slat products are made from a pre-coated ABR (abrasion resistant) material, which is why the paint has a slight texture. This texture affects the gloss level of the paint and therefore even the same colour formulation can look different to the eye. The boxing, guide and bottom bar are coated with a 72% gloss level and in very different types of paint. Therefore we have one type of touch up paint for slat and another type for box, guide and bottom bar.

The 150g spray can is available to match both boxing and slat colours. This convenient spray can is very effective for touching up larger areas and particularly on the slat. Several light coats over minor damage on the slat will not affect the surface texture.

The smaller brush on touch-up paint comes with its own brush in the bottle, which makes for easy application. The brush on touch up paint is available to match the four boxing colours and can be applied to the box, guide, bottom bar and any standard OZRoll™ trim angle. Please be sure to quote the correct part number when ordering your OZ Roll™ touch up paint.
