

The **elipso** shutter series™ Shutter System.

OZRoll™ is proud to introduce the Elipso™ Roller Shutter System. New to the OZ Roll line up and in fact new to the world this revolutionary head box system is poised to take over the Australian roller shutter market. We have seen the transformation in Europe; the home of roller shutters and now the Australian market can join the revolution.

Four years ago at the world-renowned R&T exhibition in Stuttgart Germany there were several companies displaying the round head box. One year ago at the R&T 2000 exhibition in February practically all roller shutter exhibitors were displaying some form of round head box system. The old type square box with 45° bevel is taking the back seat to the newer more modern style of the curved lines on the round box systems.

Not satisfied with just a round shape we targeted many other small improvements taking full advantage of our own home grown design and manufacturing ability.

The head box material is roll-formed in two parts by OZ Roll™ using high quality pre-painted 0.9mm gauge aluminium to exact tolerances. Many of the European products are extruded aluminium and are therefore powder coated after forming and some are in three parts, with a reduced size range.

The shape has been designed to offer Australian homes the best and most modern aspects of such a dynamic product. A small roll away from the eave provides a shadow line that helps to hide any deformation in the eave line. The joint is high on the roll and in most cases would be above the line of view. The joint design provides a positive seam that will not rattle or vibrate in the wind. The Elipso™ is available in the four standard OZRoll™ boxing colours (White, Cream, Sand & Brown) and match the guide and bottom bar perfectly.

The cast aluminium end plate has many unique features including the provision for direct motor mounting as well as a cut out for easy limit setting. The integrated box end insert allows for a concealed vertical side entry roller that is unique to OZRoll™.

The RD 360 (Elipso™ trade name) Boxing system is available in four box sizes the 140, 160 180 and 200 sizes will satisfy most of the Australian domestic shutter market. Please contact OZRoll™ for more specific information on the Elipso™ Roller Shutter Systems.
