

The RD 360 Box End Insert.

Along with the release of the all new Elipso™ shutter system comes a newly designed Box End Insert. Specifically designed for the Australian home and for our unique types of installation the new RD box end insert incorporates various control tape exit methods.

Fitted as shown the box end insert houses a vertical roller within the box frame. This 50mm roller allows for side entry installation, most commonly used for the In Reveal type installation. Having the roller fitted within the end plate provides additional room between the head box and window frame. This additional space allows for a greater angle on the control tape, drastically reducing the amount of drag resistance.

When fitted with the horizontal roller the box is now suited to many types of installation techniques, particularly the on wall installation. The horizontal roller provides a positive exit point of the control tape, with little to no resistance. The insert can also be used in this format for the more unique in reveal installations. As there is a permanent position the control tape can be ducted over or under the roller. Ducted over will allow the control tape to be deflected in the downward direction, and under would allow the control tape to deflect in the upward direction.

For motorised shutters you simply use the box end insert with no roller fitted.

The box end insert is made from high quality nylon and is an integrated part of the RD end plate system. The insert has a channel at the top that corresponds to the box end, providing a fully restrained and integral part of the head box.

The rollers are made from a special self-lubricating material to ensure long life. The shafts are made from high quality stainless steel for extra corrosion resistance. The box end inserts are available assembled in the following formats.

11.916.401	RD360 Box End Insert / IR – Left	(vertical roller)
11.917.401	RD360 Box End Insert / IR – Right	(vertical roller)
11.918.401	RD360 Box End Insert / OW – Left	(horizontal roller)
11.919.401	RD360 Box End Insert / OW – Right	(horizontal roller)
11.920.401	RD360 Box End Insert /Blank – Left	(no roller)
11.921.401	RD360 Box End Insert /Blank – Right	(no roller)
