

The New OZRoll SQ Series End Plate

OZRoll is pleased to introduce our new range of End Plates the SQ series - Designed and Manufactured exclusively by OZRoll.

The SQ End Plates have the identical range and shape (150 to 230 sizes) to the current BC45 series plates; however they also have the following overall advantages.

- Hole centres for the Somfy motors as well as for the ODS mechanism.
- Access hole in the front mid section that allows easy access when adjusting the limits for tubular motors.
- Large cut-out in the back section allowing for the use of the integrated vertical and horizontal rollers currently used on the RD360 boxing systems. A clear and unobstructed surface for easier fitment of the ODS mechanisms.
- End Plates are identified as A and B, rather than L and R to avoid misinterpretation.

The SQ End Plates use the identical box end inserts and legs that are currently used on the RD360 system. With this in mind we have decided to amend the name of the RD360 box end insert and leg to emulate our new standard. Parts will now be referred to as manual or standard, rather than RD360. This will assist with your future stock holding and avoid the situation of having incorrect legs when on site.

The release of the new SQ plates will commence from May 2005, however there will be a period of time where we will need to run down our current stock of BC45 plates. This means that the New SQ plates will be gradually introduced across the size and colour range as the old styles are completely diminished. We ask for your understanding and patience throughout this changeover period and feel confident that the change will prove to be a major benefit overall.

Assembled Shutter Installation kits will be updated accordingly to include the correct box end inserts and legs, when supplying OZ Roll Assembled Shutters.

Please find attached the relevant product numbers and descriptions for the SQ End Plates. We have also included the part numbers and description of the appropriate box end inserts and legs.
