

AE401 Extruded Slat Profile.

The AE401 **now known as SENTRY Fireshield** is an extruded slat profile ideal for commercial use or where added strength and security is required. The profile itself has a hollow section and is available in a 40mm curved slat.

You will note that the profile has a slight "V" groove line located on the convex side. This is the only indentation allowing for a clean and stylish look.

Profile Details.
