

## Battery Replacement Kit

Ozroll is pleased to confirm the availability of a 'Battery Replacement Kit' that can be used to replace the battery in our ODS Control 10 and ODS RF Control 10 controllers.

The kit consists of a replacement battery pack and a small tool that is required to remove the screw on the back panel of the controller. There will also be written instructions and diagrams detailing the correct changeover procedures.

The replacement battery is visibly different to the current battery being supplied with all Controllers and it will need to be fully charged prior to use.

Product Number: 15.260.000

**The Standard battery warranty of six months will apply for all replacement batteries.**

*It should be noted that the battery is not always the cause of the controller not working and therefore it is recommend an upgrade to the new and current E-Port Control.*

*The ODS Control 10 has now become obsolete however we will continue to manufacture the replacement batteries for the foreseeable future.*
