

Ozroll's NEW E-Port 18650 Controller

Ozroll is pleased to announce the release of our NEW E-Port 18650 Controller.

The E-Port 18650 has a larger battery capacity of 1600mA/h.

This will provide increased cycles before charging is required as well as increasing the overall life expectancy.

One of the main features of the new E-Port 18650 Controller is the ability to charge the battery pack using energy from the sun. This creates a complete stand alone system that saves on the cost of the electrician and has the added advantage of having the battery located conveniently inside the home.

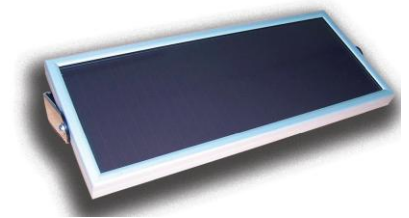

The solar panel is connected directly to the rear of the wall plate and in the case where there is insufficient sunlight or excessive use it can be re-charged using the existing 240V E-Charger.

Although the battery is larger than the previous model the E-Port 18650 has been designed to work with the existing wall plate, making it completely interchangeable.

Once again the new E-Port 18650 Controller is available in both Standard (15.600.001) and RF (15.601.001) configuration with the same benefits of operating multiple shutters.

For more information on this product or any other products please contact Ozroll direct or your local representative.

E Solar Panel

E Solar Technical Specifications	
E Port (18650) 15.600.001	
E Port (18650) RF: 15.601.001	
Output:	14.8 Volts
	1600mAh Li-Ion
Size:	H 114 mm
	W 81mm
	D 33mm
Weight	295g
