

****NEW** Non Restrained AE401 Slat Inserts**

Ozroll Industries have completed the design and development of our latest product - **Insert Slat AE401 Non Restrained (10.490.411)** and we are happy to announce its release to our distributors for purchase.

The new insert will replace the current **Insert AE401 Series Slat (10.481.401)** which is no longer available for order.

Ordering and Installation Information

The inserts are not handed and are designed to be held in place by two screws - **Screw K30x16 Pan Head Torx 10 (19.900.019)**. The screws will need to be ordered separately and need to be fitted using a Torx 10 driver bit. To avoid stripping of the screws a low torque setting is required.

All curtain slats need to be cut accurately, at the same length, to avoid binding when the screws pull the insert up.

Please contact your Sales Representative or Ozroll Customer Service Team Member on 1800 697 655 for further information.
