

E-PORT 18650 NON RF AND E-PORT 18650 RF

The E-Port 18650 Non RF controller is portable and can be moved around from wall plate to wall plate to operate more than one roller shutter (our recommendation is up to 3 shutters), highlighting the overall cost effectiveness of the system.

The E-Port 18650 RF control is not portable, and each shutter will need its own control which is then programmed to either a 1 or 9 channel E-Trans RF Remote.

E-Trans 1 Ch Remote = 15.560.001
E-Trans 9 Ch Remote = 15.561.001

The Non RF and RF E -Port 18650 controls have re-chargeable Li- Ion batteries with a large 1,600mAh battery capacity providing increased cycles before charging is required and increasing the overall battery life expectancy.

The E-Port 18650 Non RF and RF Controls are charged with the E- Charger (15.580.003).

E-TRANS

With a huge range of programming choices, you are able to program a number of shutters on one single channel to operate simultaneously or operate a whole house load of shutters separately on different channels.

Programming is simple:

1. Choose the channel on your remote that you wish to have registered with a particular E-Port.
2. With the E-Trans in one hand, hold down the middle 'STOP' button on both the E-Port control and the E-Trans remote.
3. Hold for 5 seconds or until you see the E-Port LED light flas three times and that control is now set.

E-Port RF with E-Trans Remote

E-PORT 18650 TECHNICAL SPECIFICATIONS

E-Port (18650) 15.600.001
E-Port (18650) 15.601.001

OUTPUT	14.8. Volts 1600mAh Li-Ion
SIZE	H 114mm W 81mm D 33mm
WEIGHT	295g
