

## Environmentally safe “Green” foam

OZRoll is both pleased and proud to announce that we have been using a more 'Green Friendly' polyurethane foam that is both CFC (Chlorofluorocarbon) & HCFC (Hydrochlorofluorocarbon) free for some time now.

All foams expand with the aid of a 'blowing' agent, however what is not commonly known is that most foams used in Australia contain a blowing agent which has an **Ozone Depleting Potential (ODP)**.

OZRoll are now leading the way by offering non - ODP foam.

The new 'Green' foam uses water as the blowing agent, rather than the harmful CFC & HCFC which has proven to have a damaging affect on the environment.

The foam has been tailor made to meet the production requirements of our plant and is a classic example of working together with our supplier to make a world class and environmentally safe product.

You will be able to identify the new foam by the subtle change in the colour.
